Summary of Meeting:

Contact CSA for more details on this meeting.

This was a CSA Outdoor Cooking & Illuminating Appliances Joint Technical Sub-Committee meeting held during the annual Committee Week. The main purpose of the meeting included reviewing the task force progresses, requests of changes, and open action items.

The TSC reviewed the updates of task forces. Staff had been participating in the Z21.89 Smart Enabled Task Force and presented the proposed changes by the task force. The TSC then review action items and requests for changes related to temperature conversion (Z21.58), vent opening (Z21.58), hang tags (Z21.58), dual power cords (Z21.58), tank storage (Z21.58), and unfavorable test position (Z21.89). Staff volunteered to participate in the Tank Storage task force to review and propose a rewritten clause to better address the meaning of the term “stably placed” including the situation of two-tank manifold.

The meeting was adjourned around 6:30 ET, and CSA staff will look to schedule the next meeting in January 2023.
